Work Experience

Senior Analyst - (Python Developer)

March 2023 – To Present
Sundaram Business Services

Here I have handled two projects individually,

Project Name: *MINT*

Project Description:

Mint is a web application tool used by organizations to track the hourly and daily activities of its employees. The MIS team manipulates all employee data to obtain information on productivity, efficiency, and other aspects of the workforce, and then uses this information to provide incentives such as performance bonuses and others.

Responsibilities:

- Maintain existing Python flask framework based web application and fix the issues as when appears.
- Update MIS Information into the Database.
- Ensure the smooth working of application and add new features on business needs.
- Whenever new features added in that application need to test end to end testing and deploy on IIS (Internet Information Services(IIS) Manager).
-

Project Name: *SMSF Pdf Automation*

Project Description:

The Main objective of this project is to automate accounting-based PDF files by placing links on each page that correspond to the exact amounts or words on the relevant page. These PDF files include

balance sheets, profit and loss statements, split sheets, notes to financial statements, general ledger and other categories.

Responsibilities:

- Analyze the project and create a plan to involve the entire development and testing using Python.
- Gather Information from client and User side Information to demonstrate the plan of the project and deadline to discuss with managers and clients.
- Implement and demonstrate the project to the user and clients.
- To deploy the project on client side server and, manage every deployment and demonstration procedures to the users.
- Ensure the smooth working of SMSF pdf automation, trouble shoot, improved as required based on business needs.

Software Developer - (Full Stack Developer)

December 2021– March 2023
Innovasiv Technologies Private Limited

Project Name: Venus SAP Automation

Project Description:

Venus SAP Automation is to automate the sap application through the web application, to fetch data from API to list web application and to automate the entire process to various modules in SAP.

Responsibilities:

- Analyze the task and create a plan to involve the entire web development using Django framework.
- Develop and test the code manually within the given time.
- After that, the task are once approved the code will merge in main development or client server to deploy.
- Review the existing functionality to develop features as per user requirements.
- Develop documentation of the project.

Project Name: Attendance Tool

Project Description:

Attendance Tool is a web application an organization to monitor the employee attendance, timesheet and some other feature like geofence to where the employee to clock in and out.

Responsibilities:

- Develop the part of the application from the user scope document.
 - Interacted with senior developers and help to develop and analyze the critical tasks and specifications of the project.
 - Reviewed and updated code are we test in locally like unit testing , smoke testing.
 - Involved in code integration which we are completed with the developers.
-

Project Name: *Enoah Isolution Health Insurance*

Project Description:

Enoah Isolution Health Insurance is to apply the health insurance through this application, it has different parts like admin, user and agent to apply, verify, track and more feature that all are deals with this application.

Responsibilities

- Maintaining and updating test cases and test data as per new application changes.
